

16-channel contact closure eurocard

The Click 111 contact closure card provides 16-channel contact closure outputs between the Wavetronix SmartSensor and compatible outstations. The card plugs into a detection card slot and automatically detects baud rates from the sensor.

- Uses industry-standard RS-485 communication
- Automatically sets baud rate
- Displays detection and fault state
- Dual communication ports support data from two sensors
- Fail-safe mode in case of interruption of data flow
- Solid state outputs
- Master fault output
- Configurable via hardware (DIP switches) or software (front panel interface or Click Supervisor)
- Software configuration is read-only when in Hardware Configuration mode
- Fault state and output polarity configurable
