

Cabinet interface device

The Click 600 cabinet interface device provides all the basic functionality you need for your SmartSensor Matrix or Advance installation in one compact case. This module provides power to your sensors, protects your cabinet from surges, and communicates with contact closure devices.

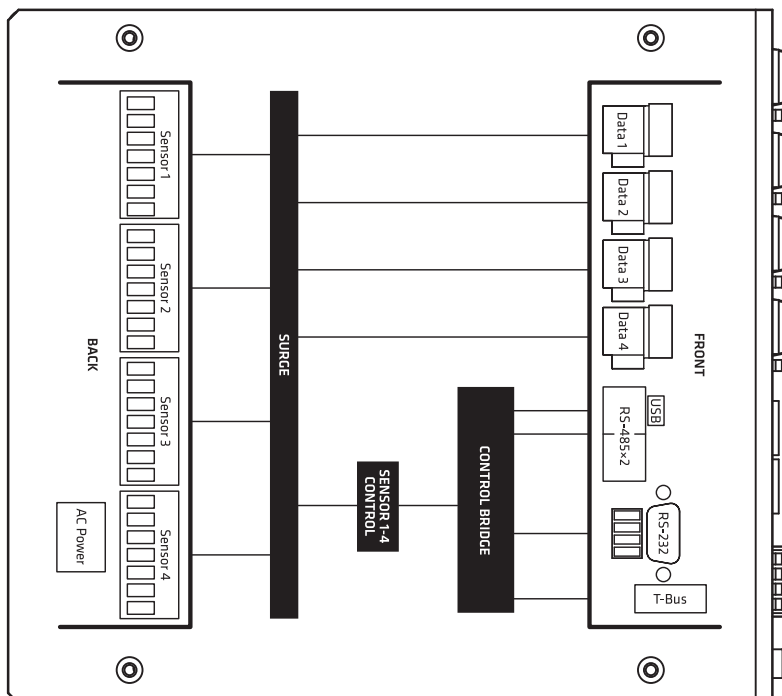

- Provides power, connectivity, and surge protection for up to four SmartSensors
- Forwards detection data collected from the sensors to contact closure devices (not included)
- Can be used in place of Intersection Preassembled Backplates
- Has a power switch for each sensor, allowing you to turn sensors on and off individually
- Can be used on a shelf or affixed to the cabinet wall
- Has multiple configuration connections for communicating from

your computer to the connected sensors:

- USB
- RJ-11 jacks for RS-485
- DB-9 connector for RS-232
- T-bus port
