

## Cabinet interface device

The Click 650 provides communication for SmartSensor Matrix and Advance to traffic controllers in one compact case. This module communicates directly to the controller through SDLC and supports contact closure devices as well. It also provides power, surge protection, and Ethernet connectivity for all sensors.

- Provides power, connectivity, and surge protection for up to four SmartSensors
- Provides sensor detection data directly to controller through SDLC port
- Can be used in place of Intersection Preassembled Backplates
- Has a power switch for each sensor, allowing you to turn sensors on and off individually
- Provides up to 64 detector channels
- Provides an Ethernet port for network connectivity.
- Can be used on a shelf or affixed to the cabinet wall
- Forwards detection data collected from the sensors to contact closure devices (not included)
- Has multiple configuration connections for communicating from your computer to the connected sensors:
  - ☐ USB
  - ☐ RJ-11 jacks for RS-485
  - ☐ DB-9 connector for RS-232
  - ☐ T-bus port
